

# SPECIAL COCO 80%

		GROWTH 18H/24H OF LIGHT				FLOWERING 12H/24H OF LIGHT									
		Transplant Pot 3,5L			Transplant Pot 8L	Pot 8L									
WEEKS	PRIOR TO GERMINATION IN SMALL POT	1	2	3	(intake of 4,5L)	1	2	3	4	5	6	7	8	9	
LOMBRI-COMPOST 100 g/L of substrate		350 gr included in 3,5L				450 gr included in 4,5L of intake									
ALGUAMYCOR 10 g/L of substrate		35 gr for 3,5L				45 gr for 4,5L of intake									
GUANODIFF Classic's 10 g/L of substrate		35 gr for 3,5L				40 gr for 8L of total volume (1/2 dose)									
GUANODIFF BLOOM 10 g/L of substrate						45 gr for 4,5L of intake	At the 4th week of flowering, add a half dose of Guanodiff Bloom (5 g/L, thus 50 g for a pot of 10L.) Only one time								

WATERING 10 days

We're assuming that your substrate's mix respect the following proportions : 80% COCO (essentially fiber) and 20% LOMBRICOMPOST.  
 According to the program, it is not advisable to add fertilizers into the soil between the transplants. Avoid draining your pots (over watering). Keep your COCO moist (microbial life)  
 All fertilizers mentioned in this scheme are used in organic agriculture, in accordance with Decree 834/2007.  
 Size of containers is given as an indication. Proportionally adjust the dosage depending on the volume of substrate used.
